

urbanspec P-Series Bin Stores

Enclosing wheeled bin containers and controlling user access, urbanspec P-Series Bin Stores are well established as the tough, versatile bin storage solution, effectively increasing recycling, while reducing fire risk and side waste issues.

Design configurable for bin capacity, features and finishes, urbanspec P-Series Bin Stores consolidate waste stream containers in a row of neat housings, secured at a safe distance from property and convenient for RCV access.

urbanspec P-Series bin stores are produced in two sizes with PL models housing two wheeled bins up to 240L capacity, and PM the 4-wheeled bin containers from 660L to 1280L. All P-Series bin stores control user access through a waste stream specific aperture in the front door. Integral shelving

for the storage of recycling boxes and caddies within the unit is available as an option.

Reduced fire risk is central to urbanspec P-Series design and where Bin Store units cannot be located outside of the six metre recommended distance due to site constraints, the units can be specified with fire-resistant wall and roof cladding options.

The urbanspec P-Series steel frame is hot-dip galvanised as standard with colour powder coated finishes available. External panel specifications are available clad in timber or steel with optional colour schemes that enable outdoor storage units to be coordinated with architectural building fabric design.

Touch Free

Bins are stored in an open position allowing touch free deposit of rubbish/recycling through the open apertures

Waste Stream Control

Front-load enclosure design with signage specific recycling and apertures

All-Steel Construction

Welded frame assemblies, tough multi-stage color coating

Varying Capacities

Designed to accommodate 4 wheeled bin containers with capacities from 660L to 1280L
